

Q1b external retention - WORKING DRAFT / PENDING CROSS-COHORT VERIFICATION

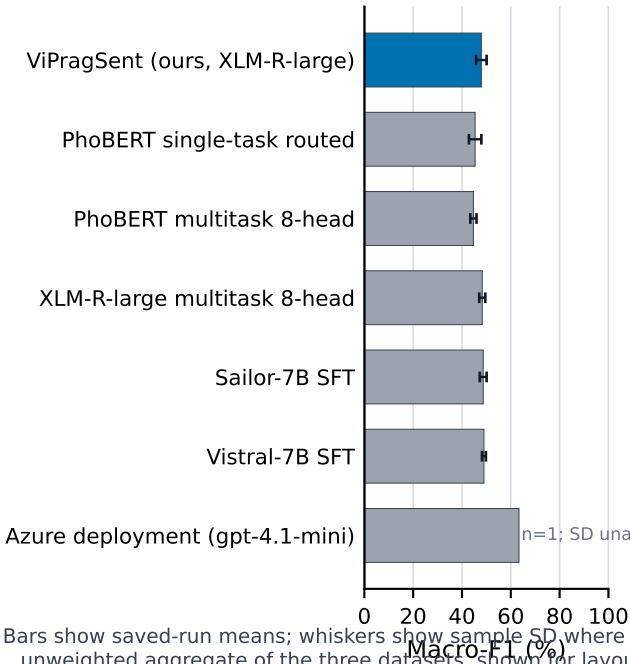

UIT-VSFC

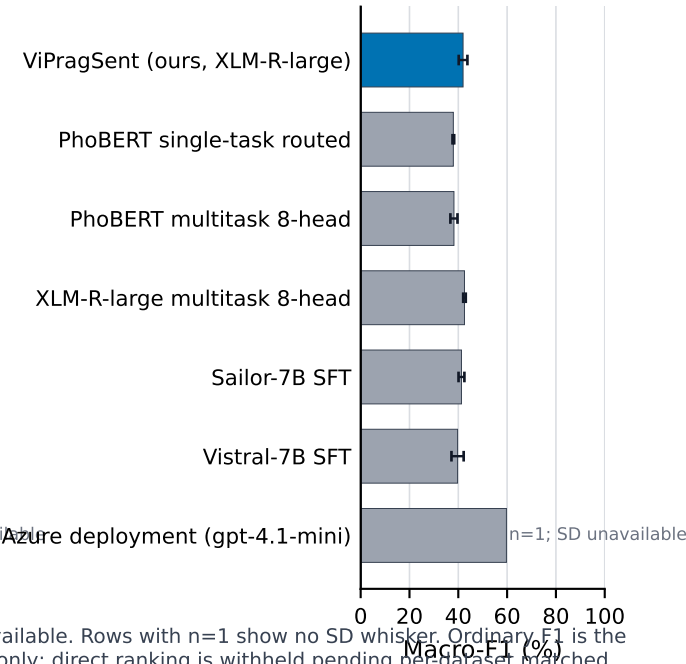

UIT-VSMEC

AIVIVN

Ordinary F1 (aggregate; ranking withheld)

Bars show saved-run means; whiskers show sample SD where available. Rows with n=1 show no SD whisker. Ordinary F1 is the unweighted aggregate of the three datasets, shown for layout only; direct ranking is withheld pending per-dataset matched ID/gold proof. Primary AIVIVN normalized-test SHA-256 prefix: 27DA59A4...; baseline prefix: F6F6A78E.... Hash comparisons are per-dataset cross-group checks, not one hash shared across datasets. Model identities, missingness, and primary scope are preserved; this is a working draft.
